

GMS Florida West Coast, Inc.

A Physician Group Practice

Preventive/Physical

We applaud your efforts to maintain your health by utilizing your preventive care physical benefits. In today's age of medicine and government involvement, these benefits continue to change, unfortunately covering less and less under preventive care. Your exact benefits are not only determined by what insurance company you have but also what plan you have chosen through your company's individual offerings. Your company may offer multiple different plan choices, each having different preventive care benefits. This makes it impossible for our office to accurately know your benefits.

Medically we feel that an EKG and certain lab tests (CBC, CMP, Lipid Panel, and TSH) are appropriate and have been previously covered under preventive care. However, you are welcome to check your individual benefit package through your employer or insurance company to see what your plan specifically covers under your current preventive care benefits.

Please realize that all insurance companies and Medicare agree that preventive care does not include any procedures or treatments including the writing of prescriptions. Further, many insurances will not cover specialty lab tests such as Testosterone, Vitamin D or hormone levels under preventive care either. We are providing you this information so that you are aware of preventive care coverage issues which currently exist and of your possible financial responsibilities. Please sign below acknowledging that these issues have been brought to your attention.

We thank you for allowing our office to provide your health care and hope to do so in the future.
